Lionel Arce

Software Developer | Nextjs | Typescript | Node | CI/CD
Greater Buenos Aires

Summary

Main stack: React | Nextjs | Node | Express | Typescript

Hello! My name is Lionel and I am a fullstack developer, I specialize in developing web applications. I consider myself a self-taught person, eager to learn and continue developing, capable of teamwork, with good communication.

Front: React | Redux | Next | Javascript | Typescript
Backend: Node | Express| Nest | Prisma | Sequelize | Java | Spring
DB: PostgreSQL | MongoDB
Cloud: AWS

Experience

Free-Lancer
Software Developer
November 2023 - Present (1 year)
Buenos Aires Province, Argentina

Among my daily tasks, I have worked in different areas such as:

Development of interactive and dynamic interfaces using React and Next.js to build reusable components and pages with SSR or SSG. I have leveraged Typescript to improve component typing and ensure the code is more robust and easier to maintain.

Consuming REST APIs using RTK Query, fetch, or Axios to retrieve and manage data. I also worked with authentication using JWT tokens and Auth0.

Creation of RESTful APIs: With Node.js and Express, I design and develop endpoints to serve data to the frontend, including authentication logic (JWT) and role-based authorization.

Designing and implementing database schemas in both MongoDB (NoSQL) and PostgreSQL (SQL). I have worked with ORM/ODM like Prisma or Mongoose to interact with the databases.

Configuring servers for production environments, managing Node.js servers on platforms like Vercel, Render, or Heroku. I also worked with Docker containers to isolate dependencies and facilitate portability.

Participating in CI/CD pipelines, configuring tools like GitHub Actions to run tests and automate deployments.

Implementing real-time communication with Socket.io, allowing live notifications or data updates without refreshing the page.

Henry
5 months

Fullstack Web Developer
November 2022 - December 2022 (2 months)
Argentina

I had to work as a full stack web developer to build an application with a group of teammates using agile methodologies (SCRUM). The application is a social network combined with a crowdfunding system, in which users can create a shelter to encourage animal care, and obtain donations transparently and totally at will from other users who visit the profile of your organization and want to give you a hand. My tasks, among others, were on the front, being able to develop reusable components with the best possible practices. In the backend organization and relationship of database models, creation of routes, etc.

Fullstack Web Developer
August 2022 - November 2022 (4 months)
Argentina

Full stack web development bootcamp in which I learned technologies to later be able to develop a SPA in which I had to build a backend and a frontend to display a list of video games, filter, sort, create, delete and update. (completed CRUD)

Freelance
Frontend Web Developer
March 2022 - August 2022 (6 months)

I worked on the development of different web applications. In charge of componentizing and developing components with the best practices (SOLID). Some of the technologies that I used for this type of projects were:
